

LASER CUT IR PATCHES

4 REASONS TO CHOOSE IR.TOOLS™ LASER CUT PATCHES

4 REASONS	IR. TOOLS	COMPETITORS
1. SandStorm Technology™	Built with our proprietary SST. Perfectly formed micro-prisms are built on one seamless layer. Your patch glows 250% brighter and will survive the fiercest sandstorm.	Built with 2 layers of glass beads that creates air gaps. Patch is vulnerable to water and debris penetration. Patch fails easily.
2. Infrared (IR) Exposure	We do not sacrifice your protection. Our unique design process maintains the greatest amount of IR protection without compromising your design.	A design process that sacrifices IR exposure and your protection.
3. Boosted Durability	Every part of your IR patch is built with high grade raw materials.	Beware of cost cutting measures in materials. Makes you vulnerable to patch failure.
4. Complexity of Design	Our talented in-house engineers carefully transform your complex design or alpha/numeric sequence into an IR patch.	Do not produce complex designs to same degree of integrity.
